

Download Java from JAVA.COM

EQSIRT requires Java Runtime Environment (JRE) version 1.5 or higher to function properly. . The most recent version of JRE is 1.7. If you have trouble installing or running EQSIRT, you may have an incompatible version of Java Runtime Environment. Here are the steps to install appropriate version of JRE. You need not to worry about which version of the Windows Operating Systems you are using (i.e. 32 or 64 bits). The Java installation kid will figure it out for you.

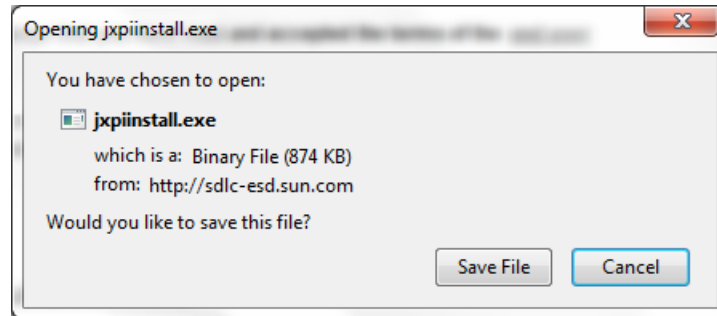

1. Go to www.java.com. You will get a picture like the one below. Either click on the Download menu at top center of the picture or Free Java Download button at the bottom.

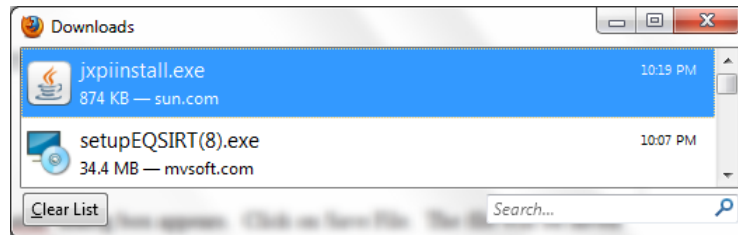

2. You will see the picture shown below to confirm you are downloading Windows version of Java. Click on **Agree and Start Free Download** button.

3. You will see a jxpiinstall dialog box appears. Click on Save File. The file will be saved into your Download folder.

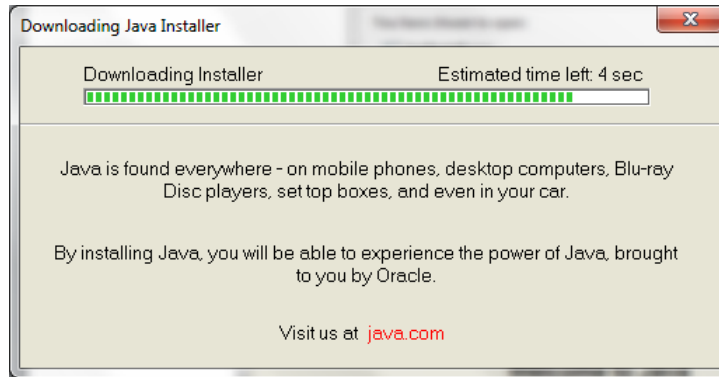

4. Java Install Starter in Download folder. Double click on jxpiinstall.exe to start download Java.

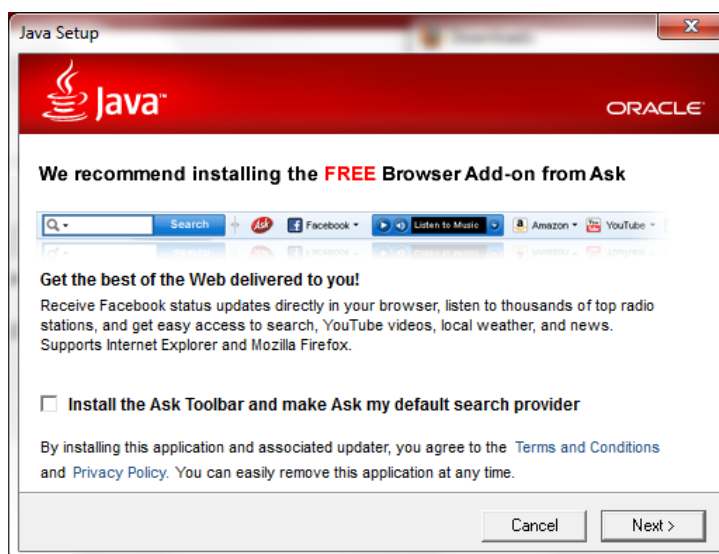

5. Java Installation start-up screen. Click the **Install** button at the lower right corner to start installation of java.

6. Java Installation package has been download.

7. Some intermediate advertising dialog boxes will be shown.

8. Java is installing and the final message will appear when it is done. You are ready to install and run EQSIRT.
